Building **SAFE** resilient communities

# SAFETY IN AGRICULTURE

## FARM SAFETY MITIGATION

### YOUR TURN KEY SOLUTION FROM START TO FINISH

Need help to design and implement a farm safety regime that is both compliant with the Work Health and Safety Laws but don't want to drown yourself and your operation in unnecessary paperwork and procedures? Then talk to us.

Every farm is different and every farmer operates differently, so there is no one size fits all off the shelf farm safety system.

Our approach is to come to you and walk and talk you through what needs to be done on your farm to make you compliant.

We can provide you with the essential policies and procedures, put in place simple seasonal start up checklists you can do, plus undertake an annual audit, manage staff training and inductions.

We are not set and forget nor will we lock you into a long term payment plan, rather we are there when you need us, should it be for a one-off session on farm to cover the basics, scheduling us in to do your seasonal safety reviews, or an annual audit and update of policy and procedures

Our job is to ensure that you can get on with your job safely without spending hours and days attempting to introduce a complex safety system that is not fit for purpose..

As a qualified trainer and assessor, firefighter, farm machinery operator and tradesman, I speak the language of farmers. This means I approach safety with workable systems that help you to meet your compliance obligations.

We work on an hourly and daily rate plus km travelled. We prefer to come to you because your time is valuable and time spent walking and talking around your operation is far more useful for you than sitting in an office attempting to convert a file of information into practical outcomes.

If you are too busy to put up the signage and complete the prestart checks on your plant, equipment, sheds, tanks, yards and windmills, then leave it to us to do the audits and follow up with the make good.

We know what needs to be done and how it can be done in a cost effective way. Unlike other consultants who have never been on farm or come out of the mining industry, we can make your farm safe without it turning into a corporate nightmare or expecting you to replace perfectly safe older equipment with brand new farm machinery. I come to you!
